Services

Upgrade with 3D customized content creation

We can create dedicated digital content for products presentation

- animations
- postcard like visuals
- videos

Wide range of products and their respective features showcase

Scenarios running in a predefined order

Key areas and functionalities highlight

Multiple special effects that can be chosen and added for greater visual impact

- transparency
- coloring
- cut-ways
- floating parts
- exploded views
- rotations
- zooming in or out
- lights or texture changing

3D models creation, CAD or 3D scanning. Post-processing

Open new paths

We provide support with

- all the interim steps for obtaining a 3D model - generating it from scratch in CAD or through 3D scanning
- post-processing adjustments - elements or areas to be defined after 3D scanning
- removing extra bends
- correcting imperfections or elements that go beyond the contour

Scanning can be built by yourself, by a third party or by ourselves (photo based).

The solution will depend on the concept's complexity and how many details need to be captured and highlighted in the model. For example, a 3D scanning will be preferred over CAD for a piece of jewelry or any product that has many small but important details.

Content creation

Words as an extra flavor on top of the visual story

Having captured your concept in digital content, we can further provide efficient text descriptions, helpful wording for marketing campaigns, exhibition projects and advertising materials.

If you have an existing collaboration with another agency, we will help with the digital content only.

Interactive light panels design and production

Impressive ways for showcasing products, systems or concepts to potential customers

We can provide the final interactive light panel or guide you in its design from start to finish.

Pending on your ideas and requirements, we can

- create the poster
- design the general model
- configure new light and effects scenarios for the same panel
- automate the control system
- fully integrate with Power 3D application
- build the entire light panel

Interactive models design and production

3D representations of complex systems

We can craft ready-made complex models, fully automated or integrated with the Power 3D application. 3D prints and light panels can be added over the model, thus combining the light effects coming from the panel and from the product print

Modelling techniques

- laser cut transparent plexiglas
- 3D prints
- forms creation out of modelling putty and clay

Suitable for adding numerical control to any in motion system activity.

Interactive models design and production

3D representations of complex systems

The inside of the model can be filled with

- LEDs systems
- optic fiber
- holographic systems
- light or smog effects

All components of a model can be

- automated
- set up to function according to a predefined program
- maneuvered either by using a control panel or through one or multiple touchscreens running the Power 3D application

Exhibition Booths / Digital Corners Planning and Implementation

Show off with us

Software and hardware support for every stage required in setting up exhibition booths or digital corners.

Guidance in planning and implementation, robust software, high-quality equipment.

We can

- collaborate with agencies specialized in booth designing
- share and receive ideas and proposals
- put our high-tech skills into implementation
- oversee and plan everything – concept, planning, design, development, implementation

Exhibition Booths / Digital Corners Planning and Implementation

Show off with us

We can setup all functionalities that allow users to explore and to interact with anything that catches their eye.

Pending on your vision, the digital corner can include

- touchscreens
- 3D interactive models
- interactive light panels
- videowall projections
- holographic outputs

Our output solutions can be integrated with any device, as needed, for great ideas showcasing.

Contact us to discuss your project.
